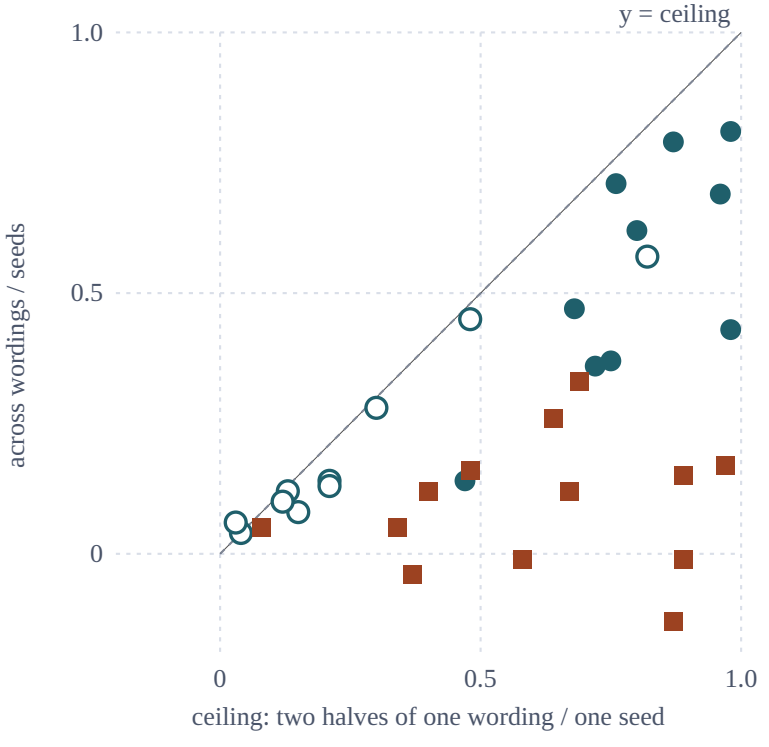
Agreement across prompt wordings (prompted) or seeds (fine-tuned) against the split-half ceiling



prompted, Qwen3-4B

prompted, Llama-3.2-3B

fine-tuned, both models

Points near the dashed line: the pattern survives a change of wording, so it belongs to the trait. Points far below it, with a high ceiling: the pattern is the teacher's own. Points near the origin: the measurement cannot tell.

One point = one model × modality × family (median over 8 traits). Removing name items moves fine-tuned points by ≤ 0.03.
